SPACEFARERS
GUIDE TO
PLANETS
SECTOR ONE
The planets used in this Guide were inspired by some of the best writing in Science Fiction and Fantasy. On top of all entries in this Guide you will find the title, author, and publisher of the book that has inspired our description of that planet. The planet descriptions in this Guide are not to be taken as accurate descriptions of the book listed, rather the book has been the inspiration for our description. In some cases we had to change some elements of the book so that the planet involved would fit into a universe of FTL (faster than light) spacecraft, and of traders roaming the Galaxy in search of profit. In other cases we had to try to guess at the authors intentions, what was the gravity of the world, .8, 1, 2? how much water covered the surface 30%, 60%, 80%?

We feel that all of the books we have used are well worth reading. You will find you will get a lot more enjoyment out of your gaming after having read the books. It is especially important for the moderator to read the books to get the “feel” of the planet-all the small details that make each planet interesting and unique, but were outside the scope of this Guide to include. If you can not find these books at your local stores, feel free to write to us for the addresses of where these books can be obtained.

This is a book of ideas. It is not meant to be the moderator's entire galaxy, but merely a small portion of one. Many of the planets listed in this guide may seem familiar to you, and that familiarity will help you to recreate your own favorite worlds in your galaxy. Of course, since this is just a brief sketch of a corner of the galaxy, the moderator will have to do some filling in at the corners, and will have to create some planets to fill his specific needs.

Each page of this guide presents a brief sketch of a planet, and gives a short rundown of the physical and mental attributes of the race or races that inhabit it. Their culture, technological achievements, and trading possibilities are listed, along with the average population of the planet. The planet itself is also described, and the important specifics are listed in the last entry.

S=type of Spaceport with "A" being the most advanced port.
P=population of planet, the number is the exponent of 10, so P 8=100,000,000.
H=per-cent of planet surface covered by water.
A=type of atmosphere, norm being oxygen.
G=gravity, 1 being Earth gravity.

Along with the description of the population of the planet there are modifiers which the moderator should apply to individuals born on that world. Most of the changes are additions or subtractions to die rolls, or show skills acquired, but several races the moderator will have to use his own judgement as they are not humanoid. The planets are numbered from one to one hundred, so that the moderator can use simple percentile dice for the determination of which planet if the birthplace of a particular character.

Following is a star system generation table that will produce entire stellar systems, complete with star class, and the quantity and type of its planets. Each planet will receive values for gravity, atmosphere, hydrography, number of moons, and technology level. On rare occasions, these charts will generate interesting special planetary types, which are described below.

**Dyson Sphere:** The Dyson sphere is a huge sphere of matter entirely englobing a star. It is built by advanced civilizations, and it is constructed out of artificial matter. The inside of the globe is sculpted into whatever shapes and terrain the builders desire, and gravity is maintained by the use of artificial gravity generators that are scattered about on the surface. Note that the surface area of a Dyson sphere whose diameter was Earth orbital distance would be fantastically greater that the surface area of a single planet. If this special type is rolled, there will be no other planets in the system, but keep rolling to determine gravity, atmosphere, hydrography, and technological level.

**Anti-Matter System:** In this case, the system is rolled exactly like a standard system, and is populated if needed. The only difference is that all of the matter in the system is anti-matter, which means that it will explode violently upon contact with normal matter. It is impossible to tell whether an object is normal matter or anti-matter without actually touching it with something. No known force will contain an anti-matter explosion, but anti-matter iron will be affected by a magnetic field just like regular iron will.

**Random Shift:** In this case, the star has no planets or debris of any kind, and is merely a shift gate to another point in the galaxy, determined randomly by the moderator. Any player entering this system would have enough time to tell that he was being shifted again, but would not be able to determine where he was going.
**Wanderers:** The wanderers are usually found in interstellar space, but may occasionally be found in systems. Continue rolling the system normally, and add one to ten Wanderer ships afterwards. They usually mass from 5,000 to 12,000 tons, and are designed to be totally self-sufficient, non-aggressive worlds. However, a Wanderer ship that is attacked has many weapons to defend itself with.

**Robotic Ships:** Continue rolling the system normally, and after you are finished, put a few self-repair stations in the system, and fill it with a hugh number of fighting ships that are attacking each other. They have been fighting and repairing themselves for thousands of years, and will probably not recognize any other ship as friendly, although they may respect neutrality. However, you must convince them that you are from a neutral nation that existed at the time their memories were installed.

**Planetary Disc:** In this case, there is only one object floating in space, and there are no moons or planets. It is a huge disc surrounding the star, which sits in a hole in the center of the disc. The disc is built of extremely dense matter, and its surface gravity should be determined normally. Note that the disc has two sides, each of which is inhabited, and the disc will range in temperature from super hot at the inside to almost absolute zero at the rim. As with the Dyson sphere, the surface area is immense.

**Beacon:** Continue rolling the planets and their characteristics normally. After all of them are finished, add a beacon to one of them at random. This is a stasis box that will contain an artifact from an earlier civilization. While the artifact is usually a weapon, stasis boxes have been known to contain almost anything. They are very difficult to open without the help of expensive and complex equipment.

**Pre-Novae:** Determine all characteristics normally, and add the fact that the star is about to become nova (within 5 years). This can be determined by the player in a number of ways, but usually only if he has the intelligence to look for it.

**Ringworld:** If there is a ringworld, it will be the only structure in the system. It is a band of matter encircling the star, and its characteristics should be determined as a normal planet. Again, note that the surface area is immense.

**Rosette Worlds:** In this case, roll the planets normally, but one of them will have two close doubles on the same orbit. Determine which planet at random, and then roll up the duplicates. Note that these were probably built a long time ago, so that they may not be very close anymore, and may not even be inhabited.

Physical  
2' tall, membrane from long middle finger to foot, other fingers are ribs for sail, index and thumb free of membrane. Body streamlined, covered in wool. Legs and feet used as tail. Huge breastbone, other bones hollow, very light body, can walk as well as fly. Reflexes + 4, Strength + 1 +{1-6}).

Mental  
Have telepathic communication within their own race. Always want to fly. Mature rapidly, live until 50, but usually suicide at 40. There is a 20% chance that any individual is currently dying of nerve cancer, which causes great pain. To fly is highest goal of race, but must switch 24 hours of flying with 24 hours on ground.

Culture  
They live on huge, one mile tall, one-half mile square pylons, which are ruins, thousands of years old.

Import  
Labor saving devices for all ground occupations.

Export  
Radioactives, Artifacts.

Notes  
Floating vegetable islands, up to 1000 miles across. There are almost no land animals, just birds and fish. The major food source is free floating algae.

The First Empire died in a blaze that lasted a thousand years. It spanned a large part of the Galaxy at its height, and its ships had explored the rest. On Hub, a complex artificial planet located near the center of the Empire, the ruling council met, and discussed the problems and solutions of controlling the destiny of this vast area. The council was drawn from the ruling classes on tens of thousands of worlds, and many of these worlds had ambitions on other planets. The huge Merchant Houses fought bitterly and violently to control the profitable trading routes, and to control the larger share of the Empire’s wealth.

At last, the eons of relative peace were broken by one of the smaller houses. One of its far-flung scouts had found a strange capsule floating in the void between the galaxies, and this held a weapon of terrible power, described only as the Hammer. At first, the Hammer was used only against other Merchant Houses, but as time went on, and the Hammer was undefeated, the House of Talane began to use it in a program of planetary conquest, and raised the standard of revolt within the First Empire.

The First Empire, forced to retaliate by the Articles of Empire, fought back with its fleets and its own powerful weapons. The galaxy disintegrated into conflict, and the wars lasted for a thousand years. As more and more battles were fought, and more ships lost and worlds destroyed, knowledge was lost, and soon the war died out as the skills of manufacturing and repairing starships were lost or forgotten. The few surviving Starcaptains fled to their home stars, to carve out personal empires or to be welcomed home as shields against the packs of raiders that wandered the once-safe starlanes virtually at will.

The Interregnum lasted for 4,000 years, and gradually the knowledge of starships began to be rediscovered. New Stellar Empires formed, and fought, and merged. Finally, in the year B749 F.E. (First Empire), the Second Empire was formed, and the calendar was begun again at year zero. This Empire controlled barely a part of the territory of the First, and did not have the technology to hold a larger part.

From their built-up and heavily populated central core, they sent sporadic warships and colonies into the adjacent areas, and cleansed this area of races that were dangerous to them. Beyond this shell of colonies and protectorates was another shell of stars, where the Second Empire had sent scouts, and explored to some extent, but this area was a wild place, with no law other than violence. Beyond this was the rest of the vast galaxy, where none had heard of the Second Empire except in vague rumor. In these lonely parts could be found anything, from empires to lost worlds of the First Empire, and colonies forgotten for a thousand years.

The inner sphere of the Second Empire was patrolled by its powerful fleets. The great Merchant Houses, some of which had survived from the time of the First Empire, controlled all of the trade in this area, and the competition was fierce and deadly. Each Merchant House had its own scouts, its own warships, and most were active in the massive intrigues that constantly threatened to dethrone the current Emperor. In the areas that were colonized and occasionally visited by ships of the Empire, smaller traders flourished. With smaller numbers of ships, sometimes with only one ship, they plied the starlanes, making a profit where they could, often trading advanced technology to science-hungry natives. Always there was the chance of finding artifacts from the First Empire, which could be sold or stolen by dozens of different groups. The few brave souls who laughed at danger and advice, who flew beyond even this shell, and into the wastelands where only the scouts had been, seldom returned. Those who did had tales of rare finds, of wonderful planets, and of danger in all shapes and variety. Here the rare few found the danger they were looking for and the profits, and often death.

Spacefarers Guide has a brief description of 100 planets in the wastelands. Even the brief descriptions in this guide have cost many men their lives. If you are brave or foolish enough to venture into the wasteland may this guide help you, and the Odd Gods of the Galaxy be with you.
